November 21, 2022

Dear Valued Customer,

As you are aware, the <u>Centers for Disease Control and Prevention</u> (CDC) has reported an increase in hospitalizations in the U.S. due to Respiratory Syncytial Virus (RSV). RSV is a common respiratory virus, typically causing mild, cold-like symptoms that can last up to four weeks. It can be a serious threat for infants and the elderly population and is the most common cause of bronchiolitis in children under the age of one.

Transmission and ways to combat including PDI solutions:

RSV can survive on hard surfaces for many hours. According to the <u>CDC</u>, RSV can spread when an infected person coughs, sneezes or talks and viral droplets are released into the environment, landing on nearby surfaces, or potentially in the eyes, nose or mouth of anyone in close proximity. RSV may also be transmitted by touching contaminated environmental surfaces.

To help prevent the spread of infection, the CDC recommends washing hands often with soap and water, avoiding touching the face with unwashed hands, and cleaning frequently touched surfaces. PDI's Super Sani-Cloth[®], Sani-Cloth[®] Plus, Sani-Cloth[®] Bleach, Sani-Cloth[®] AF3, Sani-Cloth[®] Prime, Sani HyPerCide[®], and Sani 24[®] Germicidal Disposable Wipes are effective against RSV when used in accordance with the directions for use.

PDI Product	Contact Time to kill RSV
Super Sani-Cloth Germicidal Disposable Wipes	2 minutes
Sani-Cloth Plus Germicidal Disposable Cloth	3 minutes
Sani-Cloth Bleach germicidal Disposable Wipes	1 minute
Sani-Cloth AF3 Germicidal Disposable Wipes	3 minutes
Sani-Cloth Prime Germicidal Disposable Wipes	1 minute
Sani-HyPerCide Germicidal Disposable Wipes	1 minute
Sani-24 Germicidal Disposable Wipes	10 seconds
